DEMOGRAPHY

----- Active space -----

Demographic Stages/Phases

00:00:52

AKA Demographic transition model.

Characteristics :

| Stages | Phase | Birth rate (BR) | Death rate (DR) | Demographic gap (BR-DR) | Other features |
|--------|-----------------|-----------------|---------------------------|--|---|
| I | High stationary | High | High | Narrow | - |
| II | Early expanding | High | Start declining | Starts \uparrow (D/t \downarrow in DR) max in late II | Underdeveloped, developing countries |
| III | Late expanding | Start declining | Slow declining | Starts \downarrow (D/t \downarrow in BR) | <ul style="list-style-type: none"> India Demographic gift \oplus |
| IV | Low stationary | Slow declining | Slow declining | Stable | Developed countries |
| V | Declining | Slow declining | Very low declining/stable | Minimum, negative value, $BR < DR$ | Demographic liability \oplus |

Demographic Gift/Dividend/Bonus :

- Higher no. of economically productive population \rightarrow \downarrow Dependency ratio.
- D/t \downarrow BR (Higher BR in previous demographic stage).
- Seen in developed country.
- max : Stage 3, 4 of demographic cycle.

----- Active space -----

Age Pyramids :

- ↑BR
- ↑DR
- ↑Fertility

- Economically productive.
- ↑ middle age group.
- max demographic gift.

Progression of age pyramids :**Demographic Liability :**

- Higher no of older population.
- Very low DR.
- Stage V of demographic cycle.
- Dependency ratio : ↑↑.

Annual Growth Rate :BR-DR

10

Malthusian growth rate :

| Annual growth rate | Population doubles in |
|--------------------|-----------------------|
| 1% | 70 years |
| 2% | 35 years |
| 0.5% | 140 years |
| 1.5% | ~50 years |

AGR and population :

| Population | Annual growth rate |
|--------------------|--------------------|
| Slow growing | <0.5% |
| moderate growing | 0.5% - 1% (India) |
| Rapid growing | 1-2% |
| Very rapid growing | >2% |

Fertility Indicators

00:18:42

| | Description |
|------------------------------|---|
| General Fertility Rate (GFR) | <ul style="list-style-type: none"> • No. of children a female bears during her reproductive years. • $\frac{\text{Total no. of live births}}{\text{WRA}} \times 1000$ |
| Total Fertility Rate (TFR) | <ul style="list-style-type: none"> • No. of children a female bears during her reproductive years taking ASFR into consideration. • $\frac{\text{Total no of live births}}{\text{WRA with ASFR}} \times 1000$ • Best indicator for fertility & complete family size. • Epidemiological, planning, operational indicator. • Target : <2.1 |

| | Description |
|--|--|
| Gross Reproduction Rate (GRR) | <ul style="list-style-type: none"> No. of daughters a female will bear during her reproductive years in ASFR. Total no of daughters born to a woman $\times 1000$ $\frac{\text{No. of WRA females with ASFR}}{\text{No. of WRA females with ASFR}}$ |
| Net Reproduction Rate (NRR) : Best indicator | <ul style="list-style-type: none"> No. of daughters a newborn child will bear during her reproductive years in ASFR and ASMR. Total no. of daughters born to a women in her lifetime $\frac{\text{Total females with ASFR} \times \text{ASMR}}{\text{Total females with ASFR} \times \text{ASMR}}$ Best indicator for impact of national family planning programme. Target : 1 (Replacement level) \rightarrow Stable population. |

----- Active space -----

WRA : Women in Reproductive Age group (15 to 49 years).

ASFR : Age Specific Fertility Rate.

ASMR : Age Specific mortality Rate.

Couple Protection Rate (CPR) : **>60%**

- Contraceptive methods to be provided for eligible couples. (Eligible couples : Couples with women in reproductive age.)
- If CPR **>60%** \rightarrow TFR < 2.1 \rightarrow NRR = 1 \rightarrow Stable population.
- Field, **operational indicator**.

Survey Systems

00:32:52

Civil/vital Registration System :

Birth & death : Register within 21 days.

Sample/Dual Registration System :

- Evaluated every 6 months at **national & state/district level**.
- Published **annually**.

Components evaluated :

- Fertility : Crude birth rate (CBR).
- mortality :
 - Crude death rate (CDR).
 - Infant mortality rate.
 - maternal mortality ratio.
- Latest NFHS : **NFHS-5, 2019-2020**.

Census :

- Evaluates population distribution.
- Evaluated every **10 yrs**.

National Family Health Survey (NFHS) :

- Conducted by MoHFW (ministry of Health & Family Welfare).
- Evaluated **every 5 years**.
- Latest NFHS : **NFHS-5, 2019-2020**.

Uses :

- Prevalence of diseases :
 - Anemia
 - DM
 - HTN
 - malnutrition
- Sex ratios.
- Utilization rates.
 - ANC coverage.
 - Immunisation coverage.
 - Contraceptive coverage : unmet needs of contraception.
- Literacy rates.

Demographic Variables & Statistics

00:37:56

Demographic Variables :

- Births & deaths.
- Migrations : Immigration & emigration.
- Age at marriage.
- Female literacy.
- Social mobility : movement across socio-economic classes.

Demographic Statistics Of India :

| | Statistics |
|--------------------------|--|
| CBR (SRS 2022) | 19.5/1000 population |
| CDR (SRS 2022) | 6/1000 population |
| DGR | 12.5% |
| 🌐 Annual growth rate | 0.9% (UN, MoHFW) |
| Total dependency ratio | 48.7% |
| 🌐 Sex ratio | 1020 : Total no. of females for every 1000 males. 929 : Child (0-6 yrs) sex ratio |
| Eligible couple rate | 15-18% |
| Literacy rate | 72-85% |
| Couple protection rate | 67% |
| TPR | 2.0 |
| Youth dependency ratio | 38.5 |
| Elderly dependency ratio | 10.2 |
| Potential support ratio | 9.9 |

DGR : Decadal
Growth Rate**Dependency Ratio :**

$$\frac{\text{Total dependent}}{\text{Total independent}} = \frac{\text{No. of persons aged } <14 \text{ \& } >65 \text{ years}}{\text{No. of persons aged 15-64 years}} \times 100$$

Potential Support Ratio :

- Absolute no. of persons aged 15-64 years per **one** older person aged >65 yrs.
- Japan : 2-2.5.
- France : 2.5-3.
- India : 9-10.

Population Statistics :

- Population size.
- Sex ratio.
- **Dependency ratio.**
- **Density**

Vital Statistics :

- Birth, death rate.
- Natural/population growth rate.
- Life expectancy at birth.
- mortality.
- Fertility rates.

FAMILY PLANNING

----- Active space -----

Replacement level for total fertility rate : < 2.1

Family Planning Methods (FPM)

00:01:03

Target Couple vs. Eligible Couple :

| | Eligible couple | Target couple |
|------------|--|---|
| Definition | Couples with reproductive age female (15-49 yrs) | Completed family + at least 1 live child. |
| Ideal FPM | Contraceptives | Permanent sterilization |

Failure Rate :

Life table analysis : **Best method.**

Pearl's index :

$$\frac{\text{Total no. of accidental pregnancies}}{\text{Total women years of exposure}} \times 100 \quad (\text{OR}) \quad \frac{\text{Total no. of accidental pregnancies}}{\text{Total women months of exposure}} \times 100 \times 12$$

| Contraception | Pearl Index (Per 100 women years) |
|---------------|---|
| Condoms | 2 - 20 |
| IUD | 0.5 - 1.5 |
| OCP | < 0.1 : most effective oral contraception |
| Implants | < 0.05 : most effective overall |

Types of Contraception :

| Reversible/Temporary methods | Permanent methods |
|---|--|
| <ul style="list-style-type: none"> Natural methods Barriers IUD Emergency contraception | <ul style="list-style-type: none"> OCP Implants Gossypol Centchroman male sterilization (vasectomy) Female sterilization (Tubectomy) |

Temporary Contraceptives

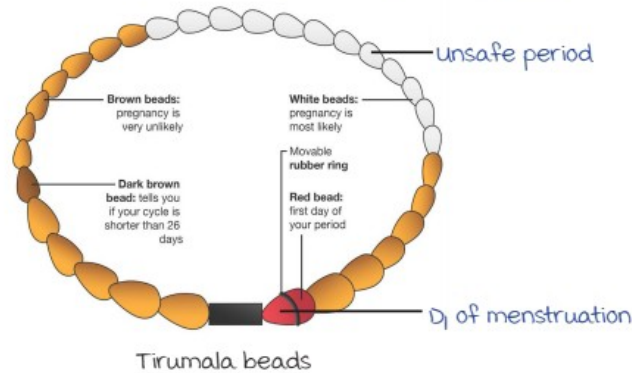

00:05:42

Natural methods :

| methods | Descriptions |
|-------------------------|---|
| Lactational amenorrhoea | <ul style="list-style-type: none"> Amenorrhoea post childbirth High failure rate Ideal contraceptive of choice during lactation : Progesterone only pills |
| Rhythm method | Based on calendar method |

----- Active space -----

| methods | Descriptions |
|----------------------------------|---|
| Basal body temperature | ↑ Body temperature by 0.3 - 0.5°C d/t ovulation : unsafe period. |
| Billing's method | Thinning of cervical mucus d/t ovulation |
| String of beads/Tirumala methods | <ul style="list-style-type: none"> • Adv : used by illiterate women • Disadv : Not used in irregular, short (<26 days) or long (>32 days) cycle |

**Barriers :****Intrauterine Devices (IUD) :**

- 1st generation : Inert IUD → Lippe's loop, Grafenberg ring.
- 2nd generation : copper containing : CuT200, CuT380A, CuT375 (multiload devices).
- 3rd generation : Hormonal IUD → mirena, Progestasert.

Hormonal IUD :

| | Progestasert | mirena |
|--------------------|---|---|
| Contains | Natural progestin | Levonorgestrel/LNG-20 (Synthetic) |
| Life span | 1 year | 5 years |
| Total hormone load | 38 mg | 52 mg |
| Rate of secretion | 65 mcg/day | 20 mcg/day |
| Characteristic | <ul style="list-style-type: none"> • Lowest expulsion rate • A/w ectopic pregnancy if contraception fails | <ul style="list-style-type: none"> • Lowest failure rate (<0.3/100 women years) • Lowest side effect |

----- Active space -----

Copper containing IUD :

| | CuT-380A | Cu 375 device |
|-----------------|---|--|
| Shape of device | T shaped | Inverted u shaped |
| Life span | 10 years | 5 years (5 > 3) |
| Copper present | On the arms as well (A) | Only on the stem |
| Thread | Polyethylene (White) | monofilament nylon (Blue green) |
| Image |  |  |

380 : Surface area of Cu on the IUD.

mode of action : Prevents fertilization > implantation.

IUD insertion :

| | Description |
|------------------------|---|
| Intra caesarean | During C/S |
| Post placental | within 10 min of delivery |
| Post partum | 10 mins to 48 hrs after delivery |
| Interval | After 6 weeks of delivery |
| Post surgical abortion | After 12-15 days (12 days : Sx abortion, 13-15 days : medical abortion) |
| Non pregnant female | within 1 st 10 days of start of menses |

Absolute Contraindications :

- Suspected pregnancy.
- Ongoing pelvic inflammatory disease.
- Undiagnosed vaginal bleeding.
- Cancer cervix, uterus or adnexa or other pelvic tumors.

Note :

- Previous ectopic pregnancy is not a C/I.
- Bleeding up to 3 days post IUD insertion : Reassurance + Iron folic acid tablets.

Side effects :

- Spotting/bleeding (m/c).
- Pain.
- PID.
- Perforation.

Oral Contraceptive Pills (OCPs) :

mala N, mala D : Ethinylestradiol 0.03 mg + Levonorgestrel 0.15 mg.

- all hormonal pills + 7 ferrous fumarate (Iron) tablets.
- mala N : Free of cost, by GOI.
- mala D : Home delivery contraceptive by ASHA worker.
